

Week 2 — Exploratory data analysis

- Lecture slides
- NotebookMind demo course
- Use ← / → to navigate

Feature engineering

- Deriving columns from columns
- `clip()`, `round()` and friends
- The `exam_score` formula

Boolean statistics

- Comparisons return boolean Series
- `mean()` of booleans = a proportion
- `value_counts()`

Group-by aggregation

- split – apply – combine
- Named aggregations
- One row per group

Lab: student performance

- Pass rate & group comparison
- Reading describe() output
- Common pitfalls
